SPECIFICATION

Pos.	Description	Code	Amount
1	Primary clutch spring (PINK-BLACK marked)	80.3701	1
2	Secondary clutch spring (PINK marked)	80.3702	1
3	Weight (BLACK marked)	80.702	6
4	Washer 1 mm	80.102	1
5	Helix AODES 38° - 48°	80.9401	1
6	Sticker (VauhtiVarikko)	PM.13.05.024	1
7	Sticker (IronBaltic)	PM.13.05.007	1

INSTRUCTIONS

Thank You that you have chosen our clutch kit. Our clutch kit helps to transfer the engine power better to the wheels so you can use the engine potential more effectively and vehicle is smoother to use. We have gone through long testing period – including real life driving tests as well as the dynamometer tests - before we have chosen this specific setup combination.

Clutch upgrade kits are fully tested and accepted by most AODES distributors. Correctly installed upgrade kit will not cause any damages to your vehicle. The manufacturer of the Clutch upgrade kit is not responsible for any damage or failure of your vehicle or in case the warranty of your machine will be voided. To ensure correct installation and to avoid possible inconveniences we recommend ordering the installation from an authorized AODES dealer.

Stage 3 Trail Kit (Tires 26"-29")

- Our most popular, best all-around use kit helps to transfer the engine power better to the wheels!
- BEST for trail riding, occasional mud and sand riding, ploughing and hauling.
- Smoother engagement!
- The lower part of Helix will let you drive at low speed with higher rpm and therefore gives you more HP and Torque to the wheels.
- The higher part of the helix is designed to give more, more and more upshifting with the same rate as your engine is making more power!
- Better acceleration and overall feeling.
- Quicker backshift which results in crisp throttle response!
- Reduces belt slip and heat.
- If you are not sure what kit to choose, then TRAIL kit is what you want.

We recommend using official dealership installation services; they have the correct tools and knowledge for such installation.

1. Remove footwell plastic around the CVT.

2. Open CVT cover.

3. Install the clutch holding tool (80.3900).

4. Remove the secondary clutch nut. Use a 17 mm wrench.

5. Remove the clutch bolt. Use 19 mm wrench.

6. Remove the cover plate nut. Use 32 mm wrench.

7. Remove clutch holding tool, primary clutch and original clutch spring.

8. Remove the weight sliders from the primary clutch.

9. Remove original weights and replace them with new weights (Pos.3).

10. Reassemble the primary clutch.

11. Squeeze the belt, so the belt would sit lower in the secondary clutch and then remove the secondary clutch.

12. Open secondary clutch.

A special tool (clutch spring compression tool: 80.400) is required.

a. Place the secondary clutch to tool

b. Lower the spring seat with the compression tool until the retaining ring appears and remove it with an appropriate pair of pliers.

- c. Raise the compression tool slowly until the spring pressure is completely loosen and you can remove the spring seat. Be careful of the loaded spring! Remove the old spring.

13. Install new secondary spring (Pos.2) and reassemble secondary clutch.
Press the spring seat with compression tool until you can install the retaining ring back.
NB! Make sure the spring seat is in correct position! Notch on the seat fits with spring end.

14. Remove the compression tool.

15. Screw in the special bolt (80.3903) to spread the secondary clutch a little bit, so the belt can fit between the two halves.

16. Reinstall CVT belt and secondary clutch. Remove the special bolt (80.3903) from secondary clutch.

17. Remove stoppers from secondary clutch. You can do it when secondary clutch is removed from ATV or in place. After removing stoppers, turn one clutch plate while holding the other in place, so that the rollers would be where stoppers were.

18. Remove old helixes by lifting them out and install new ones. Use thread lock fluid when assembling.

19. Turn the clutch plate to the other side and reinstall the stoppers. Use thread lock fluid when assembling.

20. Install washer (Pos.4) under clutch spring (engine side).

21. Install new spring (Pos.1).

22. Reinstall the primary clutch in place.

23. Reinstall the back plate nut. Do not tighten it. Use thread-lock glue.

24. Reinstall the Clutch Bolt. Do not tighten it. Use thread-lock glue.

25. Reinstall secondary clutch bolt. Do not tighten it. Use thread-lock glue.

26. Install the clutch holding tool (80.3900)

27. Tighten the bolts / nuts.

- a. Use 32 mm wrench and tighten **back plate nut** to 105-120 Nm.
- b. Use 19 mm wrench and tighten the **clutch bolt** to 105-120 Nm.
- c. Use 17 mm wrench and tighten the **secondary clutch nut** to 80 Nm.

28. Remove clutch holding tool. Check that everything is secured and install CVT cover and plastics back.

You are ready to test drive!
